

Top 5 Energy Hogs in manufacturing facilities

Energy hogs are eating away your profits as you're reading this! But most business managers don't know how to stop them. Here's Loeb Electric's list of the Top 5 Energy Hogs for manufacturing and the **Go Green-Get Green** products you can replace them with that will save you money and preserve our natural resources.

ENERGY HOG

REPLACEMENT

1

Metal Halide - These are used everywhere in Hi-Bay fixtures in manufacturing. While they're not the worst Energy Hogs they should go.

T5 Fluorescent - By upgrading to linear fluorescent lighting you can save up to 50% in energy consumption and have better lit, safer, and more productive space.

2

400W Metal Halide - If you absolutely **have** to use your current fixtures then you have no business using 400 watt bulbs. A quick and easy fix!

360W Metal Halide - By just changing each lamp to a 360 you'll save 10% in energy with no loss of light. The payback is easily worth the slightly higher cost and the savings are instant!

3

Incandescent Emergency/Exit Lights - These are the silent hogs; they go unnoticed but are on all the time and eating up wattage by the minute!

LED Emergency/Exit Lights - The future is now when it comes to these lights. This fixture will use 5% of the energy an incandescent does.

4

Manual Office Switches - They're great if you remember to turn things off. Meeting rooms and bathrooms are notorious for going "hog wild" on electricity.

Occupancy Sensors - These state-of-the-art devices automatically control lights, fans, HVAC and other things when someone occupies a space.

5

Incandescent Bulbs - These hogs have lived a good life. But they're guzzlers of wattage for simple lighting.

Compact Fluorescent Bulbs - These swirled beauties use 75% less energy AND last up to 5 times longer. These bulbs easily pay for themselves in no time!

Call us at 614.294.6351 and we'll show you how you can take advantage of government incentives that will help pay to upgrade your lighting!
